Rohit Thakur

DATA ANALYST | BUSINESS INTELLIGENCE | AUTOMATION

+91 8826849927 | rohit.thakur240693@gmail.com | New Delhi, India

PROFESSIONAL SUMMARY

Lead Data Analyst with 10+ years of experience in data analytics, business intelligence, reporting, and workflow automation across insurance, finance, and banking. Experienced in SQL, Python, Alteryx, Tableau, Power BI, SAS, VBA, Databricks, and AWS Athena. Experienced in leading teams of 6, managing end-to-end analytics projects, and delivering dashboards, automation, query optimization, and data-quality solutions.

EXPERIENCE

Lead | Guardian Life Insurance| *02/2023 - 08/2026*

- Analyzed large and complex STD/LTD claims datasets using Databricks SQL to identify claims trends, disability patterns, benefit utilization, and operational improvement opportunities.
- Conducted claims segmentation and trend analysis covering claim frequency, duration, approval and denial rates, return-to-work patterns, and claimant demographics.
- Performed data validation, data quality checks, and root cause analysis (RCA) to investigate discrepancies in disability claims, benefit payments, claim status, and reporting outputs.
- Developed interactive Tableau dashboards and reports to monitor STD/LTD claims performance, claims inventory, turnaround times, and key operational KPIs.
- Automated disability claims data processing and recurring reports using Alteryx and Python, improving processing efficiency by up to 90% and reducing manual effort.
- Collaborated with claims operations, business analysts, and cross-functional stakeholders to gather requirements, investigate data issues, and deliver analytical solutions aligned with disability insurance business objectives.

Consultant | EXL Service (Client: PFG Insurance) | *01/2021 - 02/2023*

- Collaborated with business stakeholders to gather analytical requirements and deliver insights on life insurance operations, policy performance, and customer trends.
- Developed reusable AWS Athena SQL scripts and analytical datasets supporting reporting and business intelligence across policy administration, premium collections, claims, and customer servicing.
- Extracted, aggregated, and consolidated life insurance data using AWS Athena, ensuring data accuracy and integrity across policy, premium, claims, and customer reports.
- Translated complex SAS calculations into optimized, high-performance SQL queries, improving query efficiency by up to 70% and streamlining life insurance reporting processes.
- Conducted root cause analysis of data discrepancies involving policy records, premium transactions, claims, and data-quality issues, resolving over 95% of open data-related defects within targeted timelines.

Data Analyst | SA Technologies (Client: Dell EMC) | *12/2018 - 12/2020*

- Managed the planning, design, and development of metrics reporting frameworks and standardized reporting procedures for Dell's internal customer data.
- Analyzed customer and operational data to identify trends, patterns, service-performance gaps, and improvement opportunities.
- Developed VBA macros to automate report and dashboard generation, reducing preparation time by 80% compared with manual processes.

- Developed a standalone Windows Python application to automate data processing and reporting workflows, improving operational efficiency, accuracy, and consistency.
- Identified production process inefficiencies, recommended enhancements, and implemented solutions to increase productivity and reduce manual effort.
- Conducted quarterly descriptive analytics on customer experiences with Dell services, identifying feedback trends and opportunities to improve service quality and customer satisfaction.

Process Associate | Genpact (Client: Allstate Insurance) | *02/2016 - 05/2018*

- Managed multiple automobile insurance analytics projects, collaborating with clients and project consultants to deliver solutions aligned with business requirements.
- Coordinated with onshore consultants and cross-functional teams to gather requirements, communicate daily project progress, and support timely delivery of insurance analytics and reporting projects.
- Analyzed automobile insurance data to identify trends in claims, policy performance, premiums, loss ratios, and operational efficiency, providing insights to support business decisions.
- Designed, developed, and maintained interactive Power BI dashboards for claims frequency, claim settlement trends, premium performance, and policy renewals.
- Developed SAS programs and SQL queries to extract, validate, and analyze automobile insurance data from enterprise databases and servers; maintained SAS and VBA scripts to automate reporting and data processing.
- Prepared monthly automobile insurance performance reports for management, covering claims trends, underwriting performance, loss experience, policy portfolio performance, and process-improvement opportunities.

EDUCATION

BBA, Specialization in Computer Aided Management | 2015
Guru Gobind Singh Indraprastha University
